Title: Refrigerator Temperature Monitoring
Category: Equipment
Version: 1.0
Active: true

Content:

Purpose: Keep milk, dairy, and prepared food cold and safe. The acceptable refrigerator range is 33°F to 41°F.

1. Check and record each refrigerator temperature at opening, at mid-shift, and at closing on the Refrigerator Temperature Log.

2. If the reading is above 41°F, verify it with a calibrated probe thermometer and confirm the door is fully closed.

3. Wait 15 minutes and check again.

4. If the second reading is still above 41°F, follow Food Storage Safety and notify the shift manager.

5. If the reading is below 33°F, adjust the thermostat one setting warmer and check again in 30 minutes.
