Content:

Purpose: Protect inventory when cold storage is not holding a safe temperature.

1. Frozen food must be held at 0°F or below. Refrigerated food must be held at 41°F or below.

2. If a freezer is above 0°F, move frozen items that are still frozen solid to a working freezer as quickly as possible.

3. Place a HOLD - DO NOT USE label on any item that has started to thaw and set it aside for manager review.

4. Discard any item that has been above 41°F for more than 4 hours or whose time out of temperature is unknown.

5. Record each moved, held, or discarded item on the Waste and Hold Log with the quantity, time, and reason.

6. Store all food at least 6 inches off the floor, with raw items below ready-to-eat items.
